frank arntzenius presents a series of radical ideas about the structure of space and time and establishes a new metaphysical position which holds that the fundamental structure of the physical world is purely geometrical structure he argues that we should broaden our conceptual horizons and accept that spaces other than spacetime may exist

in time and death carol white articulates a vision of martin heidegger s work which grows out of a new understanding of what he was trying to address in his discussion of death acknowledging that the discussion of this issue in heidegger s major work being and time is often far from clear white presents a new interpretation of heidegger which short circuits many of the traditional

criticisms white claims that we are all in a better position to understand heidegger s insights after fifty years because they have now become a part of the conventional wisdom of common opinion his view shows up in accounts of knowledge in the physical sciences in the assumptions of the social sciences in art and film even in popular culture in general but does so in ways ignorant of their origins now that these insights have filtered down into the culture at large we can make heidegger intelligible in a way that perhaps he himself could not white presents the best possible case for heidegger making him more intelligible to those people with a long acquaintance with his work those with a long aversion to it and in particular to those just starting to pursue an interest in it white places the problems with which heidegger is dealing in the context of issues in contemporary anglo american philosophy in order to better locate him for the more mainstream audience the language and approach of the book is able to accommodate the novice but also offers much food for thought for the heidegger scholar

ecologists traditionally regard time as part of the background against which ecological interactions play out in this book eric post argues that time should be treated as a resource used by organisms for growth maintenance and offspring production post uses insights from phenology the study of the timing of life cycle events to present a theoretical framework of time in ecology that casts long standing observations in the field in an entirely new light combining conceptual models with field data he demonstrates how phenological advances delays and stasis documented in an

array of taxa can all be viewed as adaptive components of an organism's strategic use of time. Post shows how the allocation of time by individual organisms to critical life history stages is not only a response to environmental cues but also an important driver of interactions at the population, species, and community levels. To demonstrate the applications of this exciting new conceptual framework, time in ecology uses meta-analyses of previous studies as well as post's original data on the phenological dynamics of plants, caribou, and muskoxen in Greenland.

Bringing together a body of related research which has recently developed in critical discourse analysis, this book is the first to address the role of perspective in socio-political discourse. Specifically, the contributions to this volume seek to explore from a cognitive standpoint the way in which perspective functions in three dimensions: space, time, and evaluation, to enact ideology and persuasion. A range of discourse genres are analysed, including political discourse, media discourse, and songs used as political tools. Starting from the contention that discourse processing relies on the same mechanisms that support our understanding and experience of space, the book finds a recurrent theme in the way in which perspectival concepts like distance and focus, prompted by linguistic signs, feature in our discursively constructed knowledge of social and political realities. By highlighting the complex nature of perspective-taking in ideological discourse, the volume sets the agenda for further research in this area. The book will appeal to linguists, discourse analysts, media scholars, and political scientists, and all who are interested in the relationship between language and cognition in the socio-political domain. This book was originally published as a special issue of *Critical Discourse Studies*.
